

Hire V20 Eco Hybrid

Guaranteed 163 hours of light with the integrated generator.

Choosing the power system is so easy!

Hire V20 Eco Hybrid includes four different power systems in one model: Full electric (battery), hybrid (battery + back-up generator), solar and stage V generator only. Just select the preferred mode with the power system switch and it's done!

Hire can provide customers with two external power sources:

Battery pack - A stand-alone, stackable, battery pack with 10 kWh capacity that will make the Hire V20 Eco Hybrid run up to 40 hours in battery mode. CEE outlet socket.

Solar panel kit - A stackable solar kit with 3x300 Wp sliding solar panels able to recharge the battery, reducing the use of the generator or other power sources. Multipin outlet socket.

ELECTRIC

Thanks to the integrated battery pack, Hire V20 Eco Hybrid will run without any carbon tailpipe and noise emissions. Easy battery recharge through the integrated generating set or external power source.

HYBRID

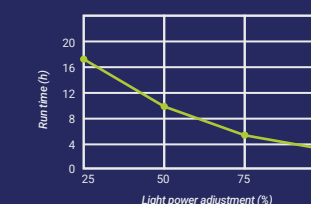

By combining battery pack and generating set into a hybrid system, Hire V20 Eco Hybrid will provide you with hundreds of hours of uninterrupted illumination without refuelling!

STAGE V ENGINE

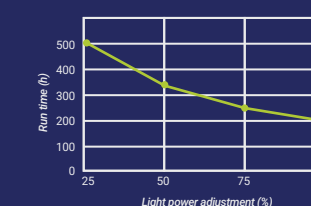

The integrated generating set with 2-cylinder diesel engine guarantees up to 163 continuous hours of light.
